Projects at DLN a Glance:

Sl:No	Project	Objective	Project Period	Supported by
1	Vihaan Project	Improve the survival and quality of life of PLHIV"	April 2013 to December 2017	Alliance India

Background of Vihaan Project

Brief introduction to Vihaan

'Vihaan' which means 'Dawn's First Light' in Sanskrit works towards scaling up care and support services and improving access to treatment for PLHIV. *The overall goal of the Vihaan program is 'to improve the survival and quality of life of People Living with HIV'.* Between April 2013 and March 2016, Vihaan will complement NACP IV plans to put in place a quality Care &Support system that will complement HIV prevention and treatment programmes already in place.

"The overall goal of Vihaan is to improve the survival and quality of life of PLHIV"

India HIV AIDS Alliance, being the Principal Recipient (PR) of the grant from the Global Fund, will provide overall technical, programmatic and financial support to the Sub-recipient organizations (SR) at the regional/state level. The SR will then manage the programme in their respective states through Sub-Sub-Recipients (SSR) who will implement the programme at district level.

Vihaan objectives

Specific objectives of the programme include:

- **Early linkages of PLHIV to Care, Support and Treatment services:** The CSC will support PLHIV who have newly tested positive to enrol into the ART programme.
- **Improved treatment adherence and education for PLHIV:** Adherence education and support can help the PLHIV sustain and manage their treatment regimes. It is essential that all three elements of successful treatment are supported: the client, the provider, and the process.
- **Expanded positive prevention activities:** Improved positive prevention will contribute to the national efforts to prevent HIV transmission and reduce overall burden of disease.
- **Improved social protection and wellbeing of PLHIV:** Social and economic well-being is an important component of care and support. The CSC will facilitate access to the existing

social welfare and protection schemes under different line departments, Corporate Sector, Public Sector Undertakings, Faith Based Organisations and civil society organization.

- **Strengthened community systems and reduced stigma and discrimination:** To ensure a robust system that supports the program goal and ensures stigma and discrimination free access to quality services, it is important that skills of the community members to advocate are strengthened. Establishing community systems like community advisory board (CAB) and discrimination response team (DRT) will bring in sustainable response.

1.2 Care and Support Centre (CSC)

The idea of CSC was conceptualized to provide sustainable systems to address care & support needs of the PLHIV and to improve the access to treatment services. NACP IV envisages that comprehensive care and support, delivered earlier through CCC, DIC and DLN, should be provided to all PLHIVs under one unit called the “Care and Support Centre”(CSC) while all the clinical and medical component of CCC is mainstreamed and linked to existing health facilities in the area. CSC should be seen as focal point for care & support services, counselling, peer education, and should provide a comforting environment.CSC will be central to all the activities of Vihaan. The programme will *ensure access to care & support services through 350 Care and Support Centers (CSCs) across the country*. Over the life of the programme, these CSCs will be developed and linked to high-burden ART centres, in accordance with the NACP IV care and support strategy. In addition, there will be 6 Children CSC and 68 Help Desks.

Apart from being a facility -based service delivery point, the CSC will also address other care and support needs of the PLHIV through outreach and effective linkages. This will optimally cover the district and maximize reach to the PLHIVs in the district. The activities of the CSC will focus on: counselling and referral for early diagnosis, early linkages to CST, improvedART adherence, psychosocial support, positive prevention & positive living, linking PLHIVs to social welfare schemes, effective district level co-ordination, and continuum of care.

1.2.1 Key Characteristics of CSC

Some of the key characteristics of CSC are as follows:

- 1 It is a friendly place where PLHIV and families:
 - a. Receive information on care and support, access to a range of health referrals, linkages to social welfare schemes and entitlements and HIV prevention education and services.
 - b. Enjoy recreational facilities and entertainment program as seen in the DICs in previous phase.
- 2 The CSC is structured in a way that it delivers optimum services to the PLHIV and supports the NACP in achieving its goals
- 3 Care and Support Centre will be established in a central location in order to make it accessible to the PLHIV. It shall be close to major district/taluka level ART centers. There will be provision for sufficient space for registration, waiting, counseling, meetings, education and entertainment
- 4 CSC will address the special needs for children, women infected or affected by HIV and PLHIV from HRGs like TGs, MSM, IDUs or FSWs.
- 5 CSC will act as a vital link between the health care service delivery system and the community members. s.
- 6 Staff of CSC will be linked not only to the ART centers, but also to ICTCs and TIs that are functioning within the city/districts.

NETWORKING AND LINKAGES

SSR Tiruvannamalai CSC Team Organogram
